

The Walk on Wheels range of wheelchairs are designed to provide and promote maximum independence and mobility for a wide range of users including those with short term mobility issues as well as individuals with more complex needs.

For long term wheelchair users, we recommend seeking a prescription from a trained healthcare professional to ensure an optimal ergonomic fit to both your body and lifestyle.

Walk on Wheels wheelchairs vary in seat width, depth and height as well as backrest and armrest height and footrest length. Many of our wheelchairs also offer different backrest and seat angles to enable the best posture for the user.

Many of our self-propelled chairs have quick release wheels which enable transit wheels to be attached if needed.

## OVERVIEW OF FEATURES

|  | Self-Propelled | Transit Wheels | Hybrid Powered/Manual | Elevating Leg Rests | Stump Supports | Folding Backrest | Paediatric |
|--|----------------|----------------|-----------------------|---------------------|----------------|------------------|------------|
